

The best all-around value

ROCKY MOUNTAIN STONEWORKS introduces SUPERIORCRETE, the all-new screening wall that truly ranks superior to other fence products in strength, durability and price. Manufactured by the leader in precast concrete fences and walls, SUPERIORCRETE features the look and feel of traditional cedar in maintenance-free precast concrete. Ideal for home or commercial use, this attractive wall adds value and appeal around any property, to last a lifetime.

Superior Construction and Design

SUPERIORCRETE features a never-before-possible vertical cedar design. This "neighbour-friendly" product features deep cedar texture on both sides. Uniquely engineered, the panels can be stacked either horizontally or vertically to provide a harmonious look with your building and landscape. The fence is set eight feet on-center from post-to-post. Broader expanses between posts make SUPERIORCRETE appear more like natural wood. Made of high-strength concrete and additional reinforcement, SUPERIORCRETE earns its name for exceptional design and value.

Customized Configurations, Colours

SUPERIORCRETE is available in varying heights. Decorative trim caps are included with SUPERIORCRETE, as in all Rocky Mountain Stone Products. The modular design makes SUPERIORCRETE easy to move, reconfigure or expand.

Safe, Private, Maintenance Free

SUPERIORCRETE provides excellent privacy, added safety, and forms an effective barrier against sound and wind. Unlike natural wood, this fence will not crack, rot, burn, or sustain termite damage. The product easily withstands extreme soil and wind movement, freeze/thaw cycles, and never needs painting. Visual details such as wood grain last indefinitely.

Cost Effective

SUPERIORCRETE is the cost-effective alternative to stone, brick or wood fences. No other fence or wall provides so many lasting benefits for so little. Our customer surveys confirm: "this is the product you've been waiting for, truly the best value in any fence."

Unique Benefits

- Superior strength and lifetime durability
- Installed eight-feet on-center from post-to-post
- Modular units are easy to move, and expand
- Withstands shifting terrain and extreme temperatures
